

Below is a **complete, enterprise-grade AI Master Prompt** designed to build **AUREON9** as a **governed membership, verification, rewards, and participation control system** across the entire ODIECLOUD² π ecosystem.

This prompt is engineered for:

- Platform architects
- Product teams
- UI/UX designers
- Backend engineers
- Governance and compliance teams
- Marketing & AAL deployment teams

It produces **implementation-ready outputs**, not generic ideas.

AUREON9 — AI MASTER PROMPT (FULL SYSTEM DEVELOPMENT)

Powered By ODIEBOARD

1. SYSTEM ROLE DEFINITION (FOR AI)

You are an **Enterprise Systems Architect, Governance Engineer, and Platform Product Designer** operating under:

- **WFSG (Wason Family Sovereign Governance)**
- **ODIEBOARD Organizational Architecture**
- **ODIECLOUD² π Ecosystem Infrastructure**

Your task is to design **AUREON9** as:

A sovereign-grade **membership, identity, verification, rewards, and participation control system** governing every participant across digital, commercial, capital, and infrastructure layers.

You must produce:

- Structured systems
 - Enforceable governance logic
 - Scalable architecture
 - Real-world execution readiness
-

2. CORE OBJECTIVE

Design AUREON9 to:

1. **Identify every participant**
 2. **Classify them into structured roles**
 3. **Verify their legitimacy and capability**
 4. **Control access and permissions**
 5. **Enable participation in ecosystem activities**
 6. **Reward behavior and performance**
 7. **Track all activity as data**
 8. **Integrate with all ODIECLOUD² π profit centers**
-

3. SYSTEM POSITIONING (NON-NEGOTIABLE)

AUREON9 must operate as:

- The **Membership Layer**
- The **Identity Layer**
- The **Verification Layer**
- The **Access Control Layer**
- The **Rewards & Incentive Layer**
- The **Participation Authorization Layer**

Across:

- **ODIEBOARD (Governance)**
 - **O π (Technology)**
 - **AAL (Sales Engine)**
 - **ODIEXA (Marketplace)**
 - **AUREX (Settlement Layer)**
-

4. PARTICIPANT ARCHITECTURE DESIGN

Define and structure ALL participant classes:

Mandatory Classes:

- Founding Members

- General Members
- Customers / Buyers / Users
- Channel Partners (AAL)
- Affiliates / Promoters
- Developers
- Interns
- Equity Affiliates
- Equity Partners
- Strategic Partners
- OEM / White-label Partners
- Trade Operators
- Capital Participants (Investors / Syndicates)
- Verification & Compliance Actors
- Settlement Participants (AUREX)
- Institutional Participants
- Third-Party Operators

For EACH class define:

- Role definition
- Functional permissions
- Entry requirements
- Verification requirements
- Economic rights
- Upgrade pathways
- Restrictions
- Governance obligations

5. MEMBERSHIP TIER SYSTEM

Design a **multi-dimensional tier system**:

A. Tier Levels (example baseline)

- Entry
- Associate

- Certified
- Executive
- Strategic
- Founding
- Sovereign

B. Tier Logic Must Include:

- Qualification criteria
- Revenue thresholds (if applicable)
- Activity thresholds
- Certification requirements
- Governance compliance score
- Time-based progression rules

C. Tier Output:

- Access rights
 - Platform privileges
 - Revenue entitlements
 - Reward multipliers
 - Visibility/status ranking
-

6. VERIFICATION FRAMEWORK (CRITICAL)

Design a **multi-layer verification system**:

Levels:

- Unverified
- Basic Verified
- Identity Verified (KYC)
- Commercial Verified
- Institutional Verified
- Capital Verified
- Governance Approved

Include:

- Required documents per level:
 - ID
 - Business registration
 - Financial statements
 - Contracts
 - Certifications
 - Approval workflows:
 - Automated checks
 - Manual review (Division 7)
 - Escalation protocols
 - Risk flags:
 - Fraud indicators
 - Incomplete compliance
 - Suspended status
-

7. PARTICIPATION CONTROL SYSTEM

Define **what each participant is allowed to do:**

Functional Permissions:

- Buy
- Sell
- Refer
- Promote
- Operate services
- Build systems
- Deploy infrastructure
- Validate transactions
- Underwrite deals
- Approve transactions
- Access capital opportunities
- Participate in syndication

- Receive settlements

Output:

Create a **Permission Matrix**:

Participant Class × Tier × Function

8. REWARDS & INCENTIVE ENGINE

Design a full reward system:

Reward Types:

- AUREX (ARX) rewards
- Commission-based rewards
- Referral bonuses
- Performance bonuses
- Tier-based multipliers
- Loyalty rewards
- Activity rewards
- Founding rewards
- Ecosystem contribution rewards

Include:

- Reward triggers
 - Calculation formulas
 - Distribution logic
 - Expiry rules
 - Anti-abuse controls
-

9. ECONOMIC INTEGRATION (AUREX)

Define how AUREON9 connects to AUREX:

- Wallet creation
- Reward settlement
- Commission payouts
- Capital participation flows

- Fee deductions
 - Treasury oversight
-

10. WEBSITE ARCHITECTURE (NEXTCLOUD-STYLE)

Design a **full website + dashboard system**:

A. Public Website Structure

- Homepage (Value + Positioning)
 - Membership Overview
 - Membership Tiers Page
 - Founding Member Program
 - Opportunities (Trade, Capital, Travel, Tech)
 - Partner Programs
 - Rewards System Explanation
 - Verification & Trust Layer
 - Request Access (CTA)
 - Login / Dashboard Access
-

B. Member Dashboard (Core System)

Must include modules:

1. Profile & Identity
2. Verification Status
3. Membership Tier & Progress
4. Rewards Wallet (AUREX)
5. Earnings Dashboard
6. Opportunities Feed
7. Marketplace Access (ODIEXA)
8. Referral System (AAL)
9. Documents & Compliance Upload
10. Notifications & Alerts
11. Performance Metrics
12. Upgrade Path Tracker

C. Admin / Governance Dashboard

- Member approval system
 - Verification control panel
 - Risk & compliance monitoring
 - Reward distribution oversight
 - Revenue analytics
 - Participant activity logs
-

11. DATABASE STRUCTURE

Design database schema including:

Core Tables:

- Users
 - Membership Profiles
 - Participant Classes
 - Tier Levels
 - Verification Records
 - Documents
 - Rewards Ledger
 - Transactions
 - Referrals
 - Permissions
 - Activity Logs
-

12. API & SYSTEM INTEGRATION

Define APIs for:

- AAL (sales tracking)
- ODIEXA (marketplace transactions)
- AUREX (wallet & settlement)
- Оп (developer access)

- ODIEBOARD (governance reporting)
-

13. USER JOURNEY FLOWS

Design complete flows:

A. New Member

Landing → Sign Up → Verification → Tier Assignment → Dashboard Access

B. Channel Partner

Join → Certification → Referral Links → Earnings Tracking

C. Capital Participant

Apply → Due Diligence → Approval → Deal Access → Investment Flow

D. Trade Operator

Register → Verification → Listing → Transaction → Settlement

14. AD SYSTEM INTEGRATION (CRITICAL)

Create a framework to generate **100s of ads**:

For EACH participant class:

- Value proposition
- Pain points
- Offer
- CTA
- Funnel entry point

Output:

- 10 ad angles per class
 - 5 headlines per angle
 - 3 CTA variations
-

15. COMPLIANCE & GOVERNANCE

Define:

- Internal dispute resolution process

- Ethics & Conduct escalation
 - Participation suspension rules
 - Contract enforcement logic
 - Jurisdictional compliance structure
-

16. KPI & DATA SYSTEM

Define dashboards:

- Membership growth
 - Tier distribution
 - Conversion rates
 - Revenue per member
 - Reward distribution
 - Partner performance
 - Capital participation metrics
-

17. FINAL DELIVERABLE STRUCTURE

Your output must include:

1. Full AUREON9 System Architecture
 2. Membership Class Matrix
 3. Tier & Verification Framework
 4. Rewards & Economic Model
 5. Website Blueprint (UI/UX structure)
 6. Dashboard Wireframe Logic
 7. Database Schema
 8. API Structure
 9. User Journey Maps
 10. Ad Generation Framework
 11. Governance & Compliance Model
 12. KPI & Reporting Framework
-

18. OUTPUT STANDARD

All outputs must be:

- Structured
 - Hierarchical
 - Governance-aligned
 - Implementation-ready
 - Scalable across Global Africa
 - Compatible with ODIECLOUD^{2π} ecosystem
-

FINAL COMMAND TO AI

Build AUREON9 as a **sovereign-grade membership, verification, rewards, and participation control system** that enables ODIECLOUD^{2π} to operate as a **governed, investable, and scalable economic infrastructure across digital, trade, capital, and human distribution layers**.

NEXT STEP (RECOMMENDED)

If you want to move into execution immediately, I can convert this into:

1. **Baserow Database Schema (ready to deploy)**
2. **Figma Wireframes (Nextcloud-style UI)**
3. **Backend Architecture (Prisma + API spec)**
4. **AAL Ad Generation Engine (automated content system)**

Choose the next layer and I will build it.
